## GREEN CAMPUS INITIATIVES

### CAMPOST PLANT

Compost, crumbly mass of rotted organic matter made from decomposed plant material, used in gardening and agriculture. Compost is especially important in organic farming, where the use of synthetic fertilizers is not permitted. Compost improves soil structure, provides a wide range of nutrients for plants, and adds beneficial microbes to the soil. The maximum benefits of compost on soil structure (better aggregation, pore spacing, and water storage) and on crop yield usually occur after several years of use.

Composts commonly contain about 2 percent nitrogen, 0.5–1 percent phosphorus, and about 2 percent potassium. Nitrogen fertilizers and manure may be added to speed decomposition. The nitrogen of compost becomes available slowly and in small amounts, which reduces leaching and extends availability over the whole growing season. Because of their fairly low nutrient content, composts are usually applied in large amounts.

## PLASTIC FREE CAMPUS

Many plastics contain chemicals and additives that can migrate back out of plastics into our food, our water, and ultimately our bodies. For example, Phthalates and bisphenols are added to plastics to make them soft, hard, or flexible - these chemicals mimic our hormones and are called endocrine disruptors. These can have serious health effects through microdosing - particularly for young people, is found in many types of plastic commonly used for food storage.

The usage of plastic has been completely outlawed at our college campus in accordance with international initiatives to reduce plastic pollution. This includes single-use plastic products like bottles, cutlery, and bags. The programme demonstrates our dedication to responsible resource management while attempting to lessen the negative effects of plastic waste on the environment.

## LANDSCAPING

Landscaping is essential for improving the visual attractiveness of the campus and supporting ecological equilibrium. The college emphasises sustainable landscaping methods by using native plants that need less water and upkeep. This practice not only saves resources but also creates green areas that enhance feelings of peace and harmony with the natural world.
